Delton, MI, USA - October 2009 – [Keltech Incorporated](#), an innovative manufacturer of energy efficient electric tankless water heaters for commercial and industrial applications, achieved its [HLW certification](#) in accordance with the [ASME Boiler and Pressure Vessel Code](#) for potable water heaters. That makes Keltech, Inc. the **only ASME HLW certified electric tankless water heating manufacturer in the world**. ASME certification means that Keltech complies with strict manufacturing rules and safety procedures dictated by the ASME Boiler and Pressure Valve Code Standards. Keltech has also earned its [National Board of Boiler and Pressure Vessel Inspectors Certificate](#).

Benefits of Specifying a Keltech ASME HLW and National Board BPVI Certified Heater

To meet these strict ASME HLW and National Board standards, Keltech:

- Develops engineering design that meets ASME standards
- Uses ASME approved materials
- Traces all raw materials and components
- Uses an AWS certified technician for brazing to ensure the highest level of craftsmanship
- Ensures pressure vessel testing is witnessed by an authorized third party inspector
- Has its certified quality assurance manual on file with ASME and National Board of Boiler and Pressure Vessel inspectors in Columbus, Ohio

The quality assurance benefits of specifying an [ASME HLW and National Board certified water heater](#):

- Manufacturing process meets or exceeds state, national and international standards
- ASME authorized third party inspector ensures standards are met through all phases of the work
- Unit is hydrostatically tested at 1.5 times maximum operating pressure during the final inspection process
- National Board and ASME certification make installation approval process easier

Keltech ASME Certified Tankless Water Heaters: The Energy Efficient Boiler Alternative

[Keltech's ASME HLW and National Board of Boiler and Pressure Vessel Inspectors certified tankless water heaters](#) are an ideal solution for engineers that need to specify a safe, energy efficient boiler alternative. Heaters control outlet water temperature +/- 1° F (.56° C) over a wide range of flow rates. The ability to precisely control water temperature makes Keltech's CN heater the preferred choice for process heating applications—the energy efficient boiler alternative.

About Keltech

Founded in 1987, [Keltech Inc.](#), manufactures electric tankless water heaters that perform on-demand. Keltech heaters provide continuous and sporadic water heating solutions for [commercial](#), [industrial](#), and [safety applications](#). Keltech also engineers and manufactures custom built electric tankless water heating solutions that require de-ionized water, reverse osmosis processing, corrosive fluid heating protection, and non-flammable fluid heating.
